

Telephone Access Module W8735D

Honeywell

Remote monitoring of your home, cabin or vacation property.

Say goodbye to worrying about your home when you're away, enjoy the convenience of being notified in case of a system failure, and fix it remotely. With the Telephone Access Module (TAM) from Honeywell, you can adjust the comfort levels in your home, cabin or vacation retreat by simply using a telephone. The TAM can monitor outdoor temperature and humidity when the proper sensors are available. This means that you can arrive home to the temperature you desire or monitor your home's HVAC systems when away. An updated system and host of other options help you keep tabs on the power outage, frozen pipes, water leakage, and humidity levels in your home remotely. In short, complete peace of mind!

W8735D Telephone Access Module

Options At Your Customers' Fingertips

Access Your Thermostat By Phone — Remotely access your thermostat to change the temperature in our home or vacation property to your desired level before arriving.

Emergency Condition Notification —

Receive instant phone notification when there is an emergency in your vacation home such as a temperature drop that indicates a heating failure and potential for property damage.

Dispatch Help Immediately — Program your TAM to contact your HVAC contractor immediately for repair service after detecting an emergency condition.

Multiple Alarm Priorities — Tell your TAM to notify you differently based on the severity of the situation, calling you instantly when water is first detected on the floor or the basement, but only at a pre-determined time when the air filter needs to be changed.

Easy Configuration and Access — User friendly, voice driven menu for remote system set up and modification of your TAM.

Works With Complex HVAC Systems — Monitor and adjust the temperature in up to 36 zones within your home through a single Honeywell TAM.

Why the TAM and not the Internet?

- One time expense; with no monthly usage charges
- Add to part of your service agreement with HVAC Contractor
- No issues with power outages or limited connections

Peace Of Mind

Remote monitoring of the home of a family member you care for. The TAM alerts (below) will give you peace of mind that your loved one is comfortable living alone; even if they are not capable of reacting to HVAC system issues.

Alerts:

- High/low room temperature
- High/low outdoor temperature
- Humidity (if sensor is available)
- Low-battery indication
- System lockout
- Power outage
- Password change
- More

A wide range of devices will interface with the TAM including:

Y8835A Networked Zoning Systems

R7184 Oil Primary

YTH9421C VisionPRO IAQ Thermostat with Equipment Interface Module (EIM)

L7224 Aquastat

Automation and Control Solutions
