

Valves and Vent

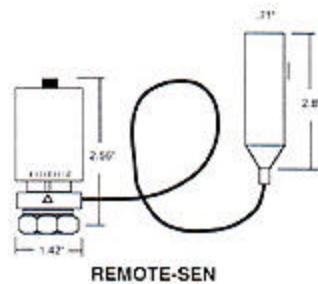

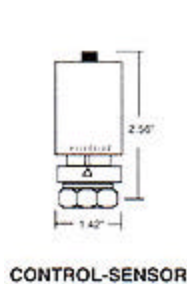

Combination Union – Shutoff Valves

These valves are nickel plated combination shutoff/unions, suitable for exposed installation, or installation behind pipe trim covers. The valves are available in either a straight pattern or angle pattern, in 1/2" and 3/4" sizes (male threaded union x female threaded connections).

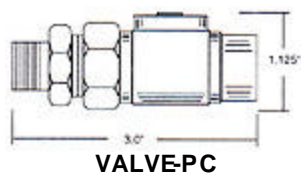

Self-Contained Thermostatic Control Valves

The nickel plated control valves, combined with the proper control head (as shown below) provide thermostatic control at the radiator. They are unavailable in straight, angle, or reverse angle configurations in both 1/2" and 3/4" sizes (male threaded union x female threaded connections).

Sensor Control Heads

These control sensors are used in conjunction with self-contained control valves above. The CONTROL-SENSOR should be used with the straight or reverse angle valves, where the control sensor head is in the open air. The REMOTE-SEN should be used where the valve and sensor head are behind a pipe trim. The CONTROL-SENSOR is available with a white or black finish.

Compact Union-Ball Valve

The VALVE-PC is a chrome plated handleless union-shutoff valve, suitable for exposed installation, or installation inside the PC pipe cover. It is available in 1/2" male NPT x 1/2" sweat connections only.

Air Vent

The chrome plated NPT-MV is the standard air vent available from Runtal.
