

SMART CONTROL®

ENERGY-SAVING TAMPER-RESISTANT FEATURE-RICH

Built to succeed, Smart Control features:

- *Diagnostic error codes to assist in troubleshooting*
- *24 or 120 volt input capability*
- *Built-in relays with replaceable fuses*
- *An intelligent "Memory Save" feature that eliminates post-outage resets*
- *Low-voltage capability to guard against shutdown during brownout conditions*
- *Color-coded and clearly labeled wire leads for ease of installation*

When the subject turns to performance, AMTROL's Smart Control unit rewrites the manual. It comes complete with a tamper-resistant setting and a post-purge feature that produces energy savings of up to 15% – savings that translate directly into 200 free showers, 160 loads of whites, or 100 whirlpool baths.

Smart Control is remarkably adjustable.

In addition to its energy-saving adjustable boiler post-purge, the unit incorporates both adjustable boiler pre-purge (0, 1, 3 and 5 minutes) and adjustable thermostat differential (5 or 10 degrees).

Smart Control makes installation, set-up and operation exceedingly easy.

- Same-color wiring and temperature sensors make installation and retrofit simple.
- Separate Mode, Up, and Down buttons simplify setting procedure.
- A large illuminated LED readout monitors heat transfer and displays diagnostic error codes to assist in rapid troubleshooting.

Take control with Smart Control.
Only from AMTROL.
