Save Fuel with an Outdoor Reset Control from Honeywell

All the heat you need, only when you need it.

How It Works

Outdoor reset saves you money by automatically adjusting the boiler settings based on the outdoor temperature. All you need to do is set the thermostat to the settings where you're comfortable and the system will handle the rest.

Saving Energy Saves Money

Outdoor reset saves energy by running your boiler at more efficient settings. The key is that the boiler can maintain comfort while running at a lower temperature, so less energy is used when it's on and less is wasted during off cycles. For the environment, efficiency means fewer resources are being used — and that also means lower energy bills for you. Adding a Honeywell outdoor reset control improves boiler efficiency by up to 15 percent* — enough to pay for itself in one to two years.

*Honeywell Inc. 1979 Study; Control Systems Providing Energy Savings with single and multi-zone Hydronic Heating. 15% is the average energy savings and can only be achieved when installing an outdoor reset model, domestic hot water priority is off and the unit is installed as directed.
