

Coil Cleaner

Tri-Pow'r® HD

HEAVY DUTY ALKALINE DEGREASER AND
DEODORIZER

The ideal environmentally friendly and biodegradable cleaner that's perfect for cleaning air-cooled condensers, evaporator coils, permanent filters, fan blades, motors and other general cleaning needs

- Heavy duty alkaline-base detergent that includes the best available surfactants and corrosion inhibitors
- Unique emulsification system for optimum degreasing
- Pleasant-scented deodorizer
- Very safe to use... it's non-acid, non-toxic and very safe for the environment

Tri-Pow'r HD is a heavy duty alkaline cleaner that is very unique when compared to other similar alkaline coil cleaners. It's based upon positive emulsion technology which is the most effective technology used for removing grease and grime. Tri-Pow'r HD emulsifies or converts greasy deposits into a fluid or liquid form that can be easily flushed. It also contains a surfactant for "wetting" the greasy deposits as well as corrosion inhibitors for protecting equipment surfaces. It's non-acid, non-toxic, biodegradable and very safe to use and it's a deodorizer as well.

Tri-Pow'r HD is an excellent cleaner for a variety of heavy duty cleaning jobs. When diluted at one part Tri-Pow'r HD to five parts water, the solution can be used to clean air-cooled condensers, permanent filters, evaporator coils, fan blades, motors and may be used for many other general cleaning applications. It can also be used at a dilution of 10:1 in "no-rinse" applications on evaporator coils, particularly where there is sufficient condensate to flush the coil. Tri-Pow'r HD is easily applied with any one of the Nu-Calgon quality sprayers.
