

SunStat® SunStat® Pro SunStat® Relay

SunTouch® TapeMat™

Almost every type of floor covering can be warmed with SunTouch. Warm, luxurious floors are popular in bathrooms, shower floors, kitchens, entries, or any room with cold floors. Simply roll out the mats, use the two-sided tape to attach to the subfloor, and cover with mortar and a finished floor.

SunTouch® WarmWire®

WarmWire works great in large rooms and in complex room layouts. Secure cable straps to the subfloor and stretch the cable between them before covering with masonry. WarmWire is approved for showers.

SunTouch® UnderFloor™

Remodeling is the perfect time to install a warm floor. Install SunTouch UnderFloor mats between the floor joists to warm the room above. UnderFloor works under any floor covering, including naildown hardwood.

SunTouch® Controls

SunTouch controls are offered in non-programmable and programmable models. An integral relay system is offered to control large systems. These dual-voltage controls sense floor or air temperature, have built-in GFCI protection and energy-saving SmartStart technology.

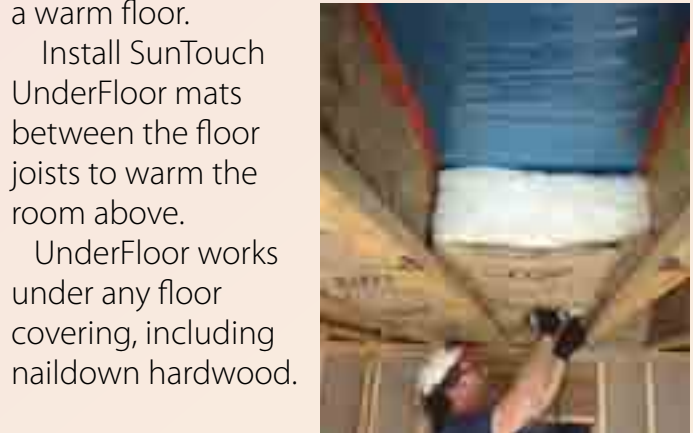

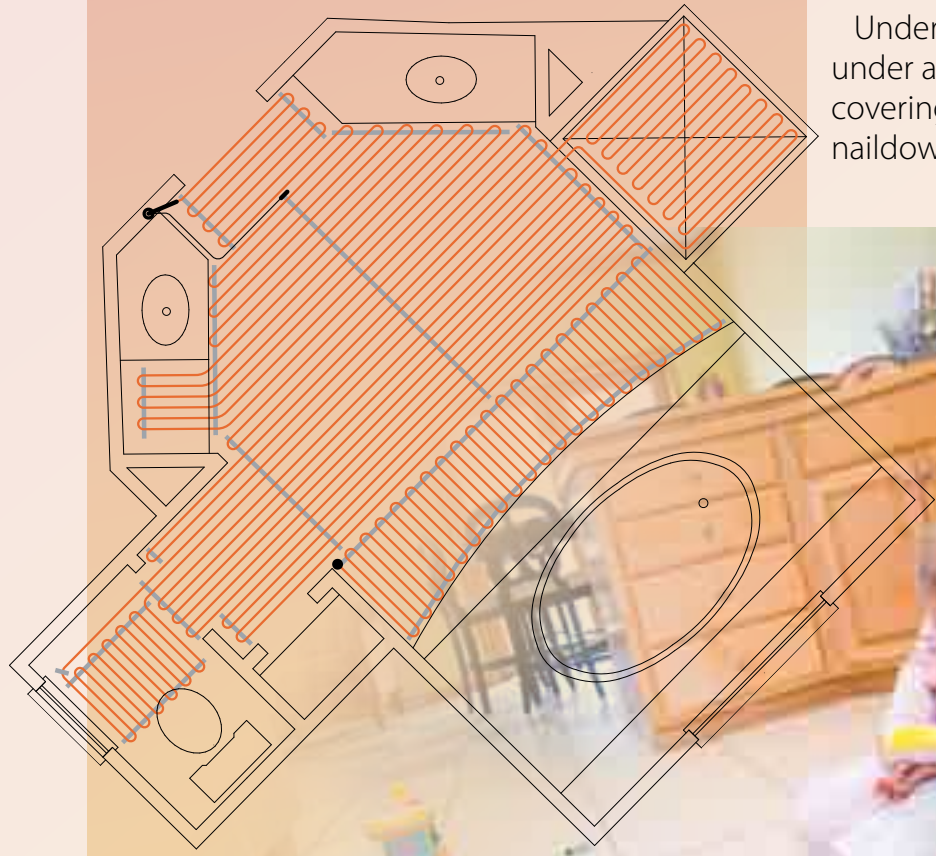

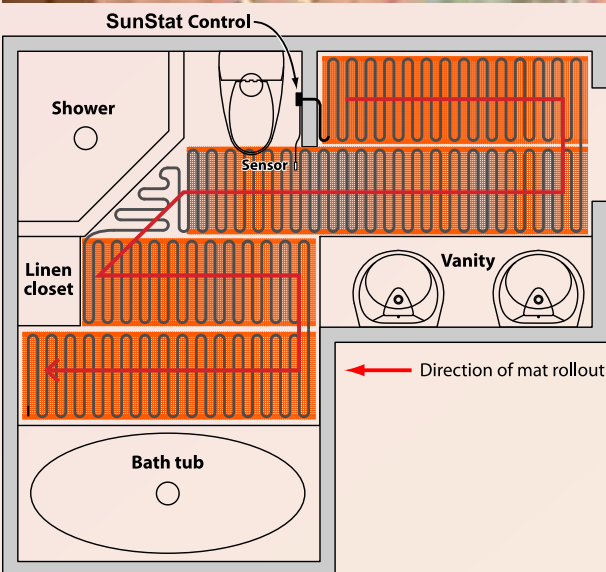

LoudMouth™ Monitor

The LoudMouth monitors heating or snow melting cables during the entire installation process. An alarm sounds if the cables are cut or damaged, allowing for easy repair before they are covered.

Designed for safety.

All SunTouch cables are built with dual wires to shield against EMF (Electromagnetic Fields). SunTouch products are fully grounded and operate with ground fault circuit protection when using a SunStat Control. Made in America for families like yours and ours.

Built to last.

SunTouch has been in the floor heating and snow melting business for over 25 years. We're part of Watts Water Technologies, an American-based manufacturing company founded in 1874. We're here to help with all of your floor heating and snow melting projects.

The SunTouch manufacturing facility's Quality System is an ISO 9001:2008 registered facility through LRQA.

AMERICAN MADE

Passes ASTM C627 to receive an "Extra Heavy" service performance rating (the highest) per 2011 TCNA Handbook for use in extra heavy or high-impact use areas.

SunTouch® SlabHeat™ Cable

Electric Indoor Slab Heating

- Maintenance-free
- No vents or duct work, silent heat
- Comfortable, even heat without the drying effects of forced air heating
- Efficient - warmth at your feet

Tough. SlabHeat is specifically engineered to handle the typical concrete pour. Each coil of SlabHeat cable can be installed on either 4" or 6" centers, ensuring even the most challenging spaces can be heated.

Applications. SlabHeat cable can be installed over an existing slab in a "slab cap" or in a new slab. Insulation is recommended to improve efficiency and to improve response time.

SunTouch® ProMelt® Mat

ProMelt mats hold the heating elements in.

SunTouch® ProMelt® Cable

ProMelt cable uses the same heating elements as the mats, but come on a roll, making it easy to choose spacing depending on the application. Typical spacing is 3" or 4" on center.
