

Residential Steam Humidifier

- Automatic maintenance keeps tank clean
- Onboard computer monitors all functions
- Two models - 120 volt and 220 volt

High efficiency, low maintenance residential humidifier

The Field Controls Steam Humidifier is quite possibly the best humidifier for homes with forced air heat. It is compatible with virtually every make and model of forced

air system, it is ideal for use with heat pumps, and it's the only humidifier that will operate in the heating system without the need for a heat call.

Residential Steam Humidifier

The humidifier that works when you need it.

The Field Controls Residential Steam Humidifier operates when there is a call for humidity, not just when there is a call for heat. This means maximum comfort for the homeowner. It is also designed for optimum efficiency with an onboard system that automatically performs routine maintenance and monitors operations for maximum safety.

Automatic Maintenance

The automatic flush system drains the humidifier every twenty-four hours of operation. This is a preventative maintenance mode that keeps the pan clean and the water fresh. Since the pan refills only when there is a call for humidity, the pan is empty during the summer months. This prevents stagnant water and the problems associated with other types of humidifiers. The S2000 can output up to 16 gallons of water per day and the S2020 can output up to 23 gallons per day.

Information is Power

The S2000 and S2020 steam humidifiers have a built-in computer chip to insure maximum efficiency, accuracy, reliability and safety. The easy to read LEDs on the unit communicate operation and trouble-shooting information.

Features

- Interlocking wiring for fan control
- LEDs for system readout
- Replaceable sacrificial anode
- Optional water filter
- Copper heating element for improved durability

Benefits

- Humidifies without a call for heat
- Compatible with all forced air heating systems
- Most effective cure for dry homes
- 100% guaranteed NO stagnating water
- Water is allowed to cool before draining, reducing risk of scalding if servicing
- Reduced clogging because tank does not drain from the bottom
- Works with heat pumps and geo-thermal systems

Humidistat Control

The Digital Display Automatic Humidistat adjusts the indoor Relative Humidity (RH)% based on the outdoor temperature. Can be wall mount or duct mount. Can be used in Automatic or Manual mode for RH setting. Outdoor air sensor included.

Model 072000

Air Proving Device

A split core current sensing relay will monitor the on/off status of any blower motor. The APD will make sure your Steam Humidifier only operates when your fan is functioning.

Model APD

Water Filter Cartridge

The WC-25 is a water filter cartridge that helps reduce mineral build up on the humidifier. The cartridge will last for one heating season.

Model WC-25

Water Hammer Arrestor

The WH-100 is a water hammer arrester that is used to eliminate pipe noise.

Model WH-100

Under Duct Steam Cover

The Model 2009 is a decorative cover for the S2000/S2020 when installed in an under-the-duct application.

Model 2009

Anode

The Z-100 is the replaceable sacrificial anode for the Steam Humidifier. The Z-100 will last one full season, while maintaining your humidifier.

Model Z-100

Duct Brackets

The Internal Duct Bracket and Under Duct Bracket are permanent mounting brackets used to make the servicing of the S2000 and S2020 quicker and easier.

Model IDB & UDB
