Real-time Charging with Wireless

It's as easy as 1, 2, 3.

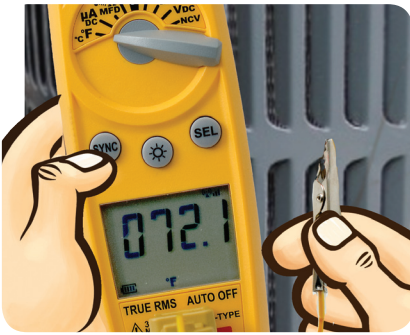

1. Inside at Evaporator

Sync your ARH5 in-duct psychrometer via wireless transmitter to the SMAN4 for live Indoor Wet Bulb readings at the condenser.*

2. Outside at Condenser

Sync your SC57 wireless clamp meter to the SMAN4 for live Outdoor Dry Bulb readings.*

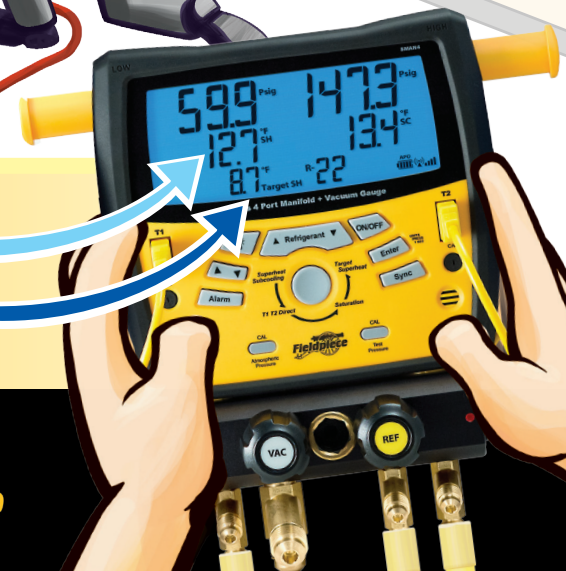

3. Reading Live Measurements

The SMAN4 is now reading in REAL-TIME, as the measurements change, all the temperatures and pressures you need to charge a system!

Compare actual superheat with target superheat as you charge!

*SMAN4 receives wireless signals from 100' away.
