

MX Series Valves

LARGE FLOW PROPORTIONAL THERMOSTATIC MIXING
OR DIVERTING VALVE

PRODUCT DATA

APPLICATION

Any application requiring accurate control of water temperature based on mixing of hot and cold water, such as: Domestic water for hotels, schools, hospitals, nursing homes, offices, public facilities, commercial and industrial buildings, space heating, central distribution systems, heat pump systems, radiant floor heating, combo systems and industrial applications.

Installer:

1. Fill in measured discharge temperature on CAUTION label.
2. Attach CAUTION label to MX series valve.
3. Explain CAUTION label to owner.
4. Leave this instruction sheet with owner or on the job site.

Benefits

The MX Series thermostatic mixing valve provides energy savings, increased comfort and safety for the user.

PRODUCT SPECIFICATIONS

- Dual purpose mixing or diverting valve.
- Constant water temperature under different operating conditions.
- Proportional valve (control of hot and cold water).
- Flow reduction in seconds if cold water supply is uninterrupted.
- Temperature adjustable.
- Unions / tailpieces connections included.
- Install in any position, heat trapping not required.
- Recirculation connection for fast response.
- Brass / stainless steel construction.
- Water surfaces Teflon® coated to prevent lime deposits.
- Allen wrench for temperature adjustment included.
- Maximum pressure differential between hot and cold ports is 7 psi.
- ASSE 1017 tested and certified.
- CSA approved.

OPERATION

Automatic operation is provided by the thermostatic element. Element will control hot and cold supply based on valve setting. If cold water is shut off, valve reduces mixed flow in seconds (speed/residual flow rates vary by size).

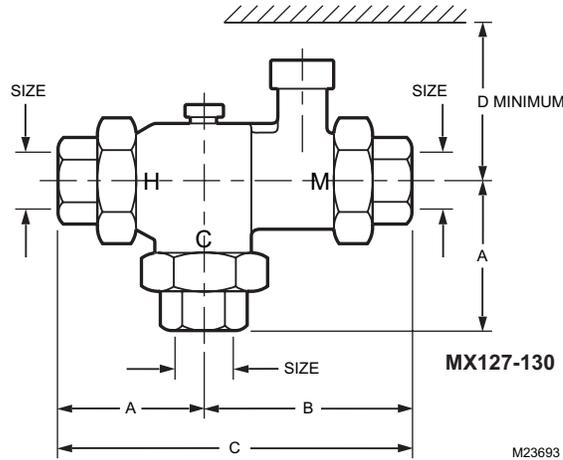

CAUTION

For domestic water application use "C" model, set temperature to not exceed 120° F (49° C) for safety. Do not override calibration. Test temperature with thermometers.

Product Number	Size NPT	C _v	Min. Flow (GPM)	GPM @ 30 psi	Temp. Range	Weight in Lbs (kg)	Dimensions in inches (mm)			
							A	B	C	D
MX 127	1 in.	4.0	1.0	22	110°-150° F (43°-65° C)	3.6 (1.6)	2.8 (66)	3.7 (94)	6.5 (165)	6.0 (152)
MX 128	1-1/4 in.	9.3	2.5	50		6.4 (2.9)	3.3 (84)	4.4 (112)	7.7 (196)	6.9 (175)
MX 129	1-1/2 in.	13.5	3.5	75		8.4 (3.8)	3.6 (91)	5.0 (127)	8.6 (218)	7.0 (178)
MX 130	2 in.	18.0	5.0	100		13.1 (5.9)	4.2 (107)	5.8 (147)	10.0 (254)	7.3 (185)
MX 127C*	1 in.	4.0	1.0	22	90°-120° F (32°-49° C)	3.7 (1.7)	2.8 (66)	3.7 (94)	6.5 (165)	6.0 (152)
MX 128C*	1-1/4 in.	9.3	2.5	50		6.5 (2.9)	3.3 (84)	4.4 (112)	7.7 (196)	6.9 (175)
MX 129C*	1-1/2 in.	13.5	3.5	75		8.5 (3.9)	3.6 (91)	5.0 (127)	8.6 (218)	7.0 (178)
MX 130C*	2 in.	18.0	5.0	100		13.2 (6.0)	4.2 (107)	5.8 (147)	10.0 (254)	7.3 (185)
MX 050-RP Recirculation Adapter Kit						0.2 (0.1)				
* Includes 1/2 in. recirculation adapter. Maximum Temperature 200° F (93° C) Maximum working Pressure 150 psi (1034 kPa).					Minimum temperature difference between hot and mix should be 10° F (6° C). Use C models only for domestic water.					

ORDERING INFORMATION

When purchasing replacement and modernization products from your TRADELINE[®] wholesaler or distributor, refer to the TRADELINE[®] Catalog or price sheets for complete ordering number.

If you have additional questions, need further information, or would like to comment on our products or services, please write or phone:

1. Your local Honeywell Automation and Control Products Sales Office (check white pages of your phone directory).
2. Honeywell Customer Care
1885 Douglas Drive North
Minneapolis, Minnesota 55422-4386

In Canada—Honeywell Limited/Honeywell Limitée, 35 Dynamic Drive, Toronto, Ontario M1V 4Z9.

International Sales and Service Offices in all principal cities of the world. Manufacturing in Australia, Canada, Finland, France, Germany, Japan, Mexico, Netherlands, Spain, Taiwan, United Kingdom, U.S.A.

Service

To remove dirt, flush valve. To remove calcium deposits, soak valve in vinegar for 24 and flush or contact factory for assistance. Do not attempt to field repair this calibrated valve.

Temperature Selection

The MX Series Valves are made in two ranges: 110°-150° F (43°-66° C) and 90°-120° F (32°-49° C). The factory setting is 130° F (54° C), and 105° F (41° C) respectively. Change temperature setting with an Allen wrench, which is included; 3/16 for MX 127 or a 5/16 for MX 128, MX 129 and MX 130. Punch through the center of the temperature range label. By turning the screw clockwise, the mix temperature increases (counterclockwise, it decreases). Each complete turn with the Allen wrench changes the temperature as follows: MX 127 (1 in.); 11° F (6° C), MX 128 (1-1/4 in.), MX 129 (1-1/2 in.) and MX 130 (2 in.), 7° F (4° C). Do not operate valve at temperatures outside of its calibrated range of 110°-150° F (43°-66° C) or 90°-120° F (32°-49° C). Use a thermometer to verify temperature.

TYPICAL INSTALLATION DIAGRAMS

Domestic Water Mixing

Use when water temperature produced by heater is hotter than desired at point of use. Many codes require that water supplied to the system be limited to 120° F (49° C) max.

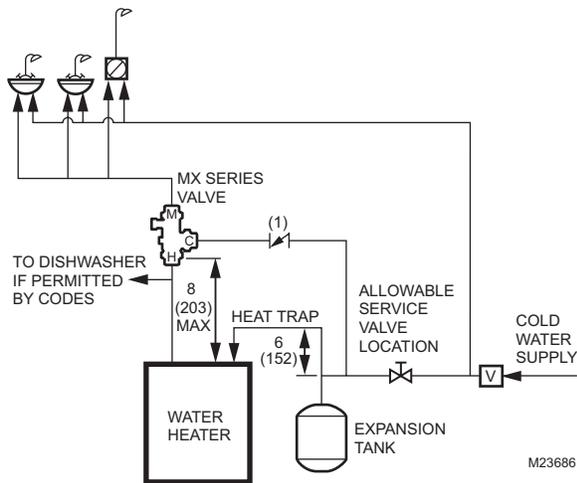

Fig. 1. Water heater without recirculation in inches (mm).

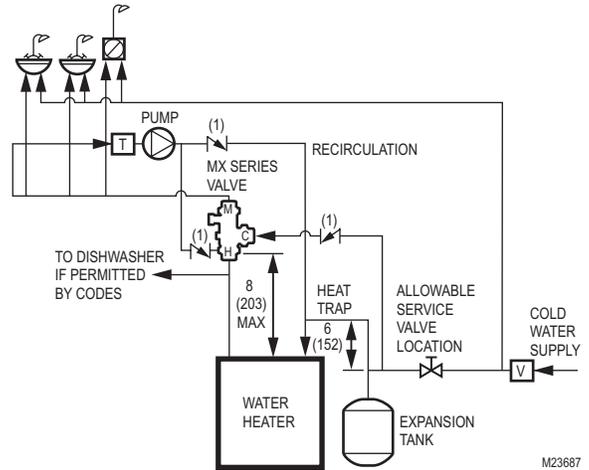

Fig. 2. Heater with recirculation in inches (mm).

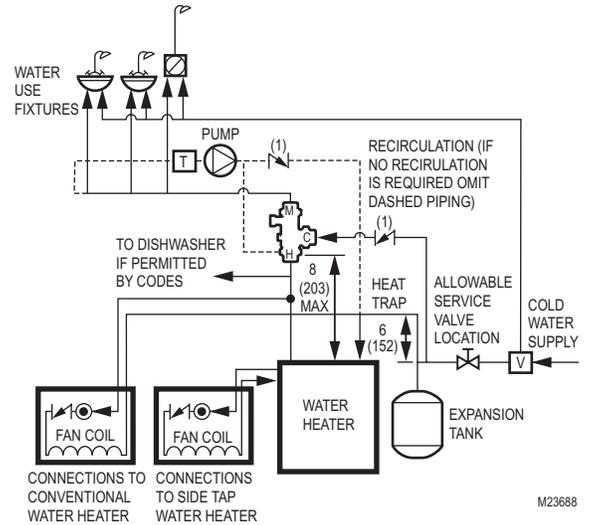

Fig. 3. Water heater is used for domestic water and space heating in inches (mm).

- 1. = Check Valve.
- 2. = Alternate Pump Location.
- V. = Any device which turns the domestic water system into a closed system, such as backflow preventers, check valves or pressure reducing valves.

NOTE: "V" is optional depending on local codes. If a "V" type valve is used, it is mandatory that a thermal expansion tank be installed as shown. Otherwise dangerously high pressures could result or water heater safety relief valve will frequently expel water. If a "V" device is not used, a thermal expansion tank is not required.

Space Heating

Boiler must operate at a water temperature higher than desired temperature in the heating system in order to perform at maximum efficiency. Example: Radiant floor heating.

Mixing Applications (Constant Supply Temperature)

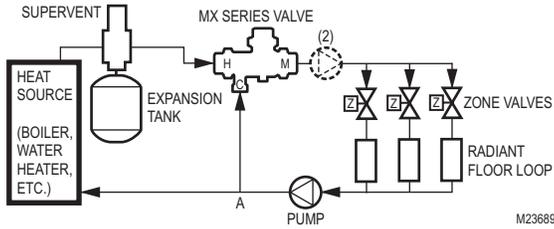

Fig. 4. Single loop.

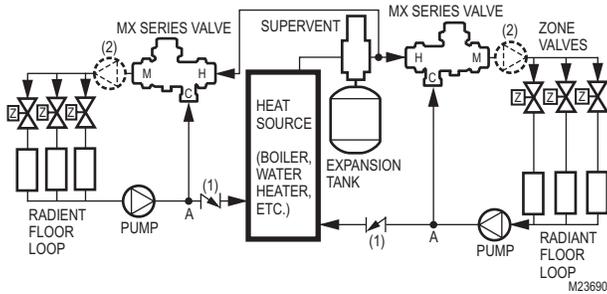

Fig. 5. Multiple loops. Each loop operates at a different temperature.

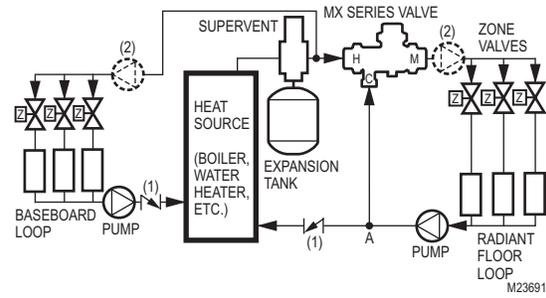

Fig. 6. Multiple Loops. One loop operates at boiler water temperature and MX Series loops at lower temperature.

Diverting Application

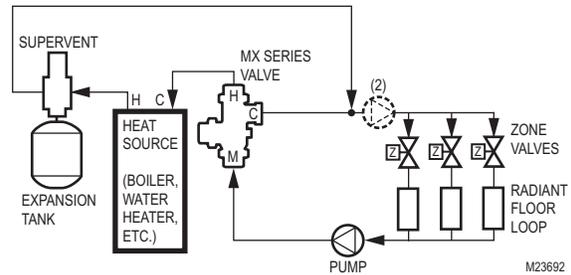

Fig. 7. Single loop. For multiple loops see Mixing Applications.
